1 fnameLabel

1.1 Description

The fnameLabel plugin tags every flow with the name of the file or interface from which the flow originates.

1.2 Configuration Flags

The following flags can be used to control the output of the plugin:

Name	Default	Description	Flags
FNL_IDX	1	Use the 'FNL_IDX' letter of the filename as label	

1.3 Flow File Output

The fnameLabel plugin outputs the following columns:

Column	Type	Description
fnLabel	U8	FNL_IDX letter of the filename/interface
fnHash	U64	Hash of the filename/interface
fname	S	Filename
